

Classification of Components

Mobile Device

**I/O For Each Component:**

Module	Login Component
--------	-----------------

Incremental Testing

Defect No.	Description	Severity	How to Correct
1	Application should not allow users to create accounts with invalid emails	2	Add a regex statement to authenticate email correctly
2	Application should not allow passwords that are too weak in strength	3	Add a regex statement to authenticate password correctly
3	Application should not attempt to authenticate a username/password when field is left blank	2	Verify input before sending an authentication request to the server
4	Application should not allow users to create accounts with usernames already in use	2	Add a unique constraint to the server and a query to check for redundancy on the database
5	Application should not allow users to create accounts with emails already in use	2	Add a unique constraint to the server and a query to check for redundancy on the database

Regression Testing

Defect No	Description	Severity	How to Correct
1.		2	Add an alert to show the

Module	Recipes Component
--------	-------------------

Incremental Testing

Defect No.	Description	Severity	How To Correct
1.	Application should not allow drinks to be made without alcohol inputed	2	Add verification that the alcohol field has input before sending to server
2.	Application should not allow drinks to be made without mixers inputed	2	Add verification that the alcohol field has input before sending to server

Regression Testing

Defect No.	Description	Severity	How to Correct
1.	By enforcing a certain number of mixers and alcohol the database component can slow down with to many added components	2	Add a limit to the amount of alcohol and mixers you can add to a recipe

Module	Ingredients Components
--------	------------------------

Incremental Testing

Defect No.	Description	Severity	How to Correct
1.	When inputing information when adding an ingredient, the keyboard will cover what you are typing	3	Add a keyboard avoiding view to the code to correct the situation
2.	Application should not accept a proof above 200	2	Add verification that the proof is under 200

Regression Testing

Defect No.	Description	Severity	How to Correct
------------	-------------	----------	----------------

1.	When the user would add a ton of ingredients to his/her inventory the my drinks component would take forever to load due to queries not finishing	2	Limit the number of ingredients a user can have in his/her inventory
----	---	---	--

Module	My Drinks
--------	-----------

Incremental Testing

Defect No.	Description	Severity	How to Correct
1.	When many drinks are available it can take a while to find the one you may be looking for	3	Added a search feature to the page for the available drinks and saved drinks

Regression Testing

Defect No	Description	Severity	How to Correct
1.	By adding a search function and showing the results in a new page the flow of the pages in the app was thrown off and there was no way to return to the other pages	2	Instead return search results in the same view as the drinks are originally displayed

Module	Tomcat Web Server
--------	-------------------

Incremental Testing

Defect No	Description	Severity	How to Correct
1.	Unauthorized handler was not getting called when appropriate	2	Fixed server filter order
2.	Mapping a url to urls that do not need authentication was not working properly	2	Implement a pattern matcher for urls
3.	Logging in with unauthorized creditalts would send back stack trace instead of correct error message	2	Implemented custom exception handler

Regression Testing

Defect No.	Description	Severity	How to Correct
1.	When implementing the custom exception handler the login page did not recognize it so it would crash	1	Added a function to recognize the exception being thrown by the web server

Module	Database Component
--------	--------------------

Incremental Testing

Defect No	Description	Severity	How to Correct
1.	Character encoding for Japanese characters would not get stored right	3	Set up a handler to detect Japanese characters
2.	Cascades were not set right and would leave orphan entities	2	Corrected script to ensure correct deleting

Regression Testing

Defect No	Description	Severity	How to Correct
1.	When adding the corrected cascade script the web server would crash	1	Updated web server to call correct cascade script upon
